Title: Scanner and Copier Troubleshooting
Category: printing_office_equipment

[SAMPLE DOCUMENT - synthetic content for the HelpDeskAI project, not an official company policy]

Symptoms and scope
A copier prints normally but scans fail, arrive rotated, or do not appear in the intended destination.

Troubleshooting procedure

1. Check whether the issue is scanning or printing by making a simple non-sensitive test copy on the device. If copying works but network scanning fails, concentrate on the scan profile and destination rather than the print queue.

2. Select the approved scan profile and confirm the destination is Meridian Drop Folder. Check the displayed recipient or folder label before starting. Do not select another employee's destination to test access.

3. Place pages in the feeder with the marked orientation and check for clips, folded corners, or mixed sizes. For a single page, use the flatbed glass if the feeder reports a jam. Never reach into a moving feeder or force a cover.

4. If the scan completes but the file is missing, wait 3 minutes and refresh the destination. Keep each scan under the 20 MB file-size guidance by choosing a suitable resolution or splitting a large batch into separate files. Do not lower quality below the needs of the business record.

Ownership and handoff
Office Equipment Support owns feeder mechanisms and copier hardware. Collaboration Services owns supported network destinations and scan-profile permissions. The Service Desk gathers the device label, destination, file type, and exact error message.

Escalation and priority
Use low priority for a one-off scan that can be completed on another approved device. Use medium priority when a shared scanner cannot deliver files after the destination refresh. Use high priority when a required time-sensitive workflow is blocked. Stop immediately if the copier smells burnt, sparks, or shows liquid damage.

Diagnostic details and records
SCN-228 means the scan service completed device capture but did not confirm delivery to Meridian Drop Folder. Include approximate scan time, destination label, file type, approximate file size, and whether a local copy was produced. Do not attach the scanned document to a general ticket if it contains confidential information.

Questions and answers

Q: The copier prints; why will it not scan?
A: Printing and scanning use different workflows and permissions, so one may work while the other fails.

Q: Can I scan to a personal cloud drive?
A: Use only the approved destination shown in the scan profile.

Ticket quality checklist
Before submitting, confirm that the report states the observed symptom rather than only a guessed cause. Separate facts from assumptions, include the time and location, and describe the troubleshooting already completed. If a step could expose a person to electrical, battery, water, or moving-equipment hazards, stop and use the safety escalation route instead of continuing. Do not bypass access controls, disable security protections, open sealed equipment, or use another person's account. A support team may ask for additional evidence, but provide it only through the

approved company channel and only when it is needed to diagnose the issue.

Expected outcome
A successful first-line check should either restore the affected function or narrow the fault to a specific service, device, destination, or building component. If the result is unchanged, preserve the original error text and report which numbered steps were completed. Do not repeat a failed action indefinitely; use the stated escalation condition and let the owning team continue diagnosis.
