Title: Approved Software Installation and Update Guide
Category: software_applications

[SAMPLE DOCUMENT - synthetic content for the HelpDeskAI project, not an official company policy]

Symptoms and scope
An employee cannot find an approved application, an installation remains pending, or an update repeatedly rolls back.

Troubleshooting procedure

1. Open Meridian App Shelf from the managed-device menu and confirm the signed-in account is the employee's own account. Search by the application display name and check the publisher label before selecting Install.

2. If the catalogue shows an approved application as pending, leave the device connected to the staff network or the approved remote tunnel and wait up to 10 minutes for catalogue synchronization. Restart the application catalogue once if its status does not refresh.

3. Check that the device has adequate free storage and that a restart is not waiting to complete another update. Save open work before restarting. Do not disable endpoint protection or download installers from file-sharing sites.

4. If the application is not listed, submit a software request with the business purpose, application name, required user group, and manager approval. The standard approval target is 2 business days after a complete request is received; security review may require additional time.

Ownership and handoff
End User Computing manages the catalogue, packaging, and managed-device updates. Information Security reviews software that requests elevated privileges or handles restricted data. The application owner resolves faults inside a successfully installed application.

Escalation and priority
Raise low priority for a non-urgent catalogue question. Raise medium priority if an approved application is unavailable to one user after the synchronization check. Raise high priority when a required application fails for a group with an active operational deadline. Do not elevate a request merely because approval is pending within its stated target.

Diagnostic details and records
APP-318 means the catalogue reports an installation transaction rollback after the package was selected. Include application name, device asset label, last successful update time, and the exact status text. Do not include license keys or confidential files.

Questions and answers

Q: Can I install a personal copy from the internet?
A: No. Use Meridian App Shelf or submit a request for review.

Q: Does approval mean installation is immediate?
A: No. Approval and package availability are separate stages; the catalogue must synchronize and the device must meet its requirements.

Ticket quality checklist
Before submitting, confirm that the report states the observed symptom rather than only a guessed cause. Separate facts from assumptions, include the time and location, and describe the troubleshooting already completed. If a step could expose a person to electrical, battery, water, or moving-equipment hazards, stop and use the safety escalation

route instead of continuing. Do not bypass access controls, disable security protections, open sealed equipment, or use another person's account. A support team may ask for additional evidence, but provide it only through the approved company channel and only when it is needed to diagnose the issue.

Expected outcome
A successful first-line check should either restore the affected function or narrow the fault to a specific service, device, destination, or building component. If the result is unchanged, preserve the original error text and report which numbered steps were completed. Do not repeat a failed action indefinitely; use the stated escalation condition and let the owning team continue diagnosis.
